

Symphony OCR (SOCR) | VS | Scanner/Desktop Software

Symphony OCR automatically detects image-only PDF files and converts them to a searchable format while preserving all original file data. Using Symphony OCR, ALL your documents are searchable based on content *automatically*.

CAN IT OCR A VERY LARGE DOCUMENT (SUCH AS HEALTH RECORDS) WITHOUT TYING UP SCANNER OR PC RESOURCES?

SOCR

OTHERS

- Symphony OCR runs on its own server, so it never uses up a local computer's processing power.
- It converts large documents and batches of documents without tying up desktop software.
- It runs autonomously in the background, so it doesn't need explicit instruction to OCR documents

WILL IT AUTOMATICALLY DETECT NON-SEARCHABLE FILES RECEIVED EXTERNALLY (EMAILS/ FLASH DRIVES/FILE TRANSFERS)?

SOCR

OTHERS

- Scanner software will only convert documents that are scanned in.
- Symphony OCR constantly searches all files coming in and going out of your document management or filing system.
- It will analyze and convert all documents, prioritizing new files you add to your system

WILL IT OCR DOCUMENT ARCHIVES OR BACKLOGS?

SOCR

OTHERS

- Symphony OCR searches for and converts new files to your system.
- It will also convert any backlog or archived files, so your entire document repository is content searchable - not just your new files.
